

Carbon Counting Chatterbox*

1. Cut out the large square along the outer edge.
2. Put the printed side face down and fold each corner along the dotted line to the centre.
3. Turn the folded paper over so the flaps are now face down.
4. Once again, fold each corner to the centre point, making a square crease.

5. Fold in half and crease to make a rectangle, then fold again to make a square. This is your Carbon Counting-Chatterbox!
6. Unfold twice and using both hands, place both thumbs and index fingers under each flap.
7. Push toward the centre and practise opening and closing the game.

8. Ask a friend "where do you go?" and you spell the place by opening and closing the game for each letter of the place: P-A-R-K, that would be 4 moves.
9. Next ask your friend how they want to get to the place. Spell the mode like before. Your friend should choose one more mode, then lift the panel to read!

* Carbon amounts are based on averages
